BifpB, an outer membrane lipoprotein required for the biogenesis of bundle-forming pili in enteropathogenic Escherichia coli.",
J. Bacteriol. 178, 8655-663(1996).
-!- FUNCTION: Is absolutely required for pilus biogenesis, and for EPEC localized adherence and autoaggregation. Acts at a step in the BFP biogenic pathway after production and processing of the structural pilus subunit bfpA.
-!- SUBCELLULAR LOCATION: Attached to the outer membrane by a lipid
                                                                                                                                                                                                   Bacteria, Proteobacteria, Gammaproteobacteria, Enterobacteriales,

A cluster of fourtreen genes from enteropachogenic Escherichia coli sulficient for biogenesis of a type IV pilus.";
Mol. Microbiol. 20:325-337(1996).
I-FUNCTION: Is absolutely required for pilus biogenesis, and for EPEC localized adherence and autoaggregation. Acts at a step in the BFP biogenic pathway after production and processing of the extractural pilus subunit bfpA (By similarity).
I-SUBCELLULAR LOCATION: Attached to the outer membrane by a lipid anchor (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Escherichia coli 0127:H6.

-I. FUNCTION: THIS ESSENTIAL COMPONENT OF THE HIGH-MOLECULAR-WEIGHT

-I. FUNCTION: THIS ESSENTIAL COMPONENT OF AMINO-ACID SUFFICIENCY

GCD COMPLEX IS REQUIRED FOR CONDITIONS OF AMINO-ACID SUFFICIENCY

TO REPRESS THE SYNTHESIS OF GCN4 IN YEAR! GCD2 IS ALSO REQUIRED

FOR CELL VIABILITY. ITS FUNCTION CAN PARTIALLY BE REPLACED BY GCN3

FOR CELL VIABILITY. ITS FUNCTION CAN PARTIALLY BE REPLACED BY GCN3

FOR CHARACTERIST OF GCN3 IS AN ANTAGONIST (GCN4 TRANSLATIONAL

TO KD SURface-exposed protein of Rickettsia rickettsii.";

RL MOI. Marcobol. 3:157-1586(1989).

TEUNCTION: THE 120 kba SURFACE-EXPOSED PROTEIN IS A MAJOR STRUCTURAL PROTEIN WHICH MAY PLAY A ROLE AS A RICKETTSIAL VINCENTION OF LAYER WITH HEXAGONAL SYMMETRY.

TO SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY A S-LOWER WITH HEXAGONAL SYMMETRY.

C. I. SUBCELLULAR LOCATION: OF THE RICKETTSIAE OMPA/OMPB FAMILY.

-!- FUNCTION: WHEN PRESENT IN MULTIPLE COPIES, ALLOWS CELLS TO GRO
-!- FUNCTION: WHEN PRESENT FROM FASSING OF HDEL RECEPTOR BY EITHER SLOWING TRANSPORT FROM THE ER OR BY STIMILATING VESICLE BUDDING FROM GOLGI MEMBRANES.
-!- SUBCELLULAR LOCATION: Type II membrane protein.
-!- MISCELLARBOOK: IN THE PROCESS OF TRANSPORT, SED4 ITSELF MAY MIGRATE TO THE GOLGI APPARATUS AND FUNCTION IN SUBSEQUENT TRANSPORT EVENTS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SEQUENCE FROM N.A., AND CHARACTERIZATION.

Sequence 33073, Application US/0925291A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: MAIC J.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: 107196.136
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,190
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142

LENGTH: 751
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 3.2469, Application US/09252991A
Sequence 3.2469, Application US/09252991A
Patent NO. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: APPLICATION OF SERVICES TO 136
CURRENT FILING DATE: 1099-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR PILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  36;

                                                                                                                                                                                                                                                                9
                                    The present sequence represents a Neisseria meningitidis antigenic polypeptide, designated BASB030. It was identified from N. meningitidis serotype B strain ATCC 13090. The nucleotide sequence was first identified in the Incyte Pathoseq database of unfinished genomic DNA sequences of this strain. The polypeptides or polynucleotides can be used in vaccine compositions for preventing N. meningitidis infections, be used for treating N. meningitidis disease. The products can also be used for diagnosis of disease, staging of disease or response of an infectious organism to drugs, as well as for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SESLSKTKTLANPRVLTQNRKEAKIESGYEIPFTVTSIANGGSSTNTELKKAVLGLTVTP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a Neisseria meningitidis antigenic polypeptide, designated BASB030. It was identified from N. meningitidis serotype B strain ATCC 13990. The nucleotide sequence was first to identified in the Incyte Pathoseq database of unfinished genomic DNA sequences of this strain. The polypeptides or polynucleotides can be used in vaccine compositions for preventing N. meningitidis infections. e.g. bacteremia and meningitis. The antibodies against the protein can be used for treating N. meningitidis disease. The products can also be used for diagnosis of disease, staging of disease or response of an infectious organism to drugs, as well as for drug screening.

New isolated Neisseria meningitidis polypeptides and polynucleotides, used to develop products for the diagnosis, prevention and treatment infections

Claim 3; Page 93-96; 97pp; English.

The present sequence represents a Neisseria meningitidis antigenic polypeptide, designated BASB030. It was identified from N. meningitidis serotype B strain H44/76. The nucleotide sequence was first

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a new gram-negative bacterial bleb presenting on its surface the PorB outer membrane protein from Chlamydia trachomatis, or a protective antigen from C. pheumoniae. The invention is useful for preventing C. trachomatis or C. pheumoniae infection in a host. The present amino acid sequence represents a Neisseria gonorrhoeae protein as described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel gram-negative bacterial bleb presenting on its surface PorB outer membrane protein from Chlamydia trachomatis or protective antigen from Chlamydia pneumoniae, useful for preventing Chlamydia infection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins and antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP76736-ABPB1046 represent nucleic acid molecules of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                New protein from Neisseria gonorrheae, useful for the manufacture of a medicament for treating or preventing N. gonorrheae infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           LLAKDKAFLQAEKDIADLGALYSQNFQLKYKNVBEFRSILRLDNADTTGNRNTLVSGRGS

                                                                                                                                                                                                                                                                                                                                              The present sequence is the BASB031 protein sequence-1, from strain Mc2931(ATCC 43617), derived from Moraxella catarrhalis. This polypeptide sequence has homology to Pseudomonas aeruginosa, PilQ fimbrial assembly protein. This sequence can be used for prevention and treatment of M.catarrhalis infections, like otitis media, pneumonia, sinusitis and nosocomial infections. The antibodies and polymucleotide sequence can be used for diagnosing infections, staging of disease and for determining the response of an infectious organism to drugs. The DNA sequence is also used as a hybridisation probe in screening process for identifying homologue and orthologs from other species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      97

                                                                                                                                                                                                                                                                                                                                                                The present sequence is the BASBO11 protein sequence-2, from strain Mc2931(ATCC 43617), derived from Moraxella catarrhalis. This polypeptide sequence has honology to Pseudomonas aeruginosa, PilQ fimbrial assembly protein. This sequence can be used for prevention and treatment of M.catarrhalis infections. 1ke otteis media, pneumonia, sinusitis and nosocomial infections. The antibodies and polynucleotide sequence can be used for diagnosing infections, sraging of disease and for determining the response of an infectious organism to drugs. The DNA sequence is also used as a hybridisation probe in screening process for identifying homologue and orthologs from other species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   97
          Moraxella catarrhalis BASB031 protein-2, from strain Mc2931(ATCC 43617).
                                BASB031; strain Mc2931; ATCC 43617; PilO fimbrial assembly protein; diagnosis; treatment; otitis media; sinusitis; pneumonia; screening; homology; nosocomial infection; antibody; ortholog; hybridisation probe.

The present sequence is the BASBO31 polypeptide, from strain Mc2911, derived from Moraxella catearhalis. This sequence has homology to escudomonas aeruginosa, pilo fimbrial assembly protein. This sequence can be used for prevention and treatment of M.catarrhalis infections, like otitis media, preumonia, sinusitis and nosocomial infections. The antibodies and polymucleonide sequence can be used for diagnosing infectious organism to drugs. The DNA sequence is also used as a hybridisation probe in screening process for identifying homologue and orthologs from other species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel polypeptides used as vaccines for treating Maraxella catarrhalis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                38 AEQAYTGKPISLEFADIPVRAVFDILAGFTGINIITDDSVTGSMTIRLMNIPWDQAFDVI

This sequence has homology to Pseudomonas aeruginosa, PilQ filmbrial assembly protein. This sequence can be used for prevention and treatment of M.catarrhalis infections, like otitis media, pneumonia, sinusitis and nosocomial infections. The antibodies and polynuclectide sequence can be used for diagnosing infections, staging of disease and for determining the response of an infectious organism to drugs. The DNA sequence is also used as a hybridisation probe in screening process for identifying homologue and
